INDEX

5′-AMP adsorption 351
  5′-ADP synthesis
  phosphate surfaces
  prebiotic catalysis
adenine 83
  deamination
  hydrogen bonding
  hydrogen cyanide
  hydrolysis
  prebiotic synthesis
  reactivity
  replicator
amino acids 99
    biosynthesis
    branched
    evolution
    transamination
  acetolactate
  glycolic acid
  Krebs cycle
  lactic acid
  metabolism, origins
  reductive carboxylation
amino acids 111
    decomposition
    stability
  alanine
  glycine
  hydrothermal
  leucine
  quasi-equilibrium
  vents, submarine
amino acids 375
  adsorption
  equilibrium constants
  free energy
  nucleic acids
  peptides
  silica
amino acids 443
  adsorption
  microspheres
  nitrogen bases
  nucleosides
  specificity
  surfaces
anhydrobiotic organisms 277
  Bacillus subtilis spores
  DNA-protein cross links
  dormant life
  double strand breaks
  Earth orbit
  extreme dryness
  Mars
  space vacuum exposure
autocatalysis 401
  1, 4-benzodiazepinooxazole derivative
  chirality amplification
  racemization
  second order asymmetric transformation
  spontaneous resolution
  symmetry breaking
biogenesis 395
  amino acids
  animation
  glutamic acid
  synthetic pathways
biomolecule 201
  chiral
  handedness
  selectivity
  Supernova
  symmetry breaking
  transition
Braterman *et al.* 673
  ammonia, concentrations of ammonium zinc
      ferrocyanide
  ferrocyanide
  hexacyanoferrate (II)
  ion exchange
  potassium zinc ferrocyanide
  zinc ferrocyanide
chemolithoautotrophic 141
  geochemical constraints
  hydrothermal
  metabolism
  sulfur
  thermodynamics
  thermophiles
chirality 175
    amplification
    extraterrestrial
    importance
    origins
  chiral
    homogeneity

Origins of Life and Evolution of the Biosphere **25:** 591–593, 1995.
